Thailand Field Site
BANGKOK, THAILAND

IE.UNC.EDU/THAILAND
About the Thailand Field Site

Participants take 18 credit hours consistent with their UNC degree program including a group multidisciplinary research capstone project in sustainable energy and the environment. Many of these research projects get published in peer reviewed literature. Students live in off campus housing, become involved in Thai culture and have the opportunity to travel throughout Thailand. They begin their experience at UNC with an introduction to Thai language and culture. Graduates of this program are highly competitive on the job market and getting into graduate school.

The Institute for the Environment’s field site program is coordinated through the Study Abroad Office of the College of Arts and Sciences in partnership with the Environment, Ecology and Energy Program.

Location
King Mongkut’s University of Technology Thonburi (KMUTT), Bangkok, Thailand

Timing
January - July
