About the Outer Banks Field Site (OBXFS)

The OBXFS offers a semester-long program that combines a multidisciplinary approach to the sustainable management of coastal resources with a rich set of experiences set

in the ecology and culture of North Carolina's coastline and estuaries. Students receive a strong grounding in applied policy and ecology and a unique experience in integrating diverse academic and community perspectives to issues of immediate relevance.

The Institute for the Environment's field site program is coordinated through the Study Abroad Office of the College of Arts and Sciences in partnership with the Curriculum for the Environment and Ecology.

Location

Roanoke Island, NC
