

UNC CLEAN
TECH SUMMIT

2023 PARTNERSHIP OPPORTUNITIES

MARCH 27 - 28, 2023

Showcase the Southeast as a Cleantech Leader

Innovating to a Clean Economy

The 9th annual UNC Cleantech Summit will be held on **March 27 - 28, 2023** at the Friday Conference Center as an in-person event. This event is the largest event of its kind by a university in the United States with 1,000 attendees and speakers.

The 2023 Summit will feature keynote speakers, panels, workshops, and TED Talk-style engagement opportunities for the following topics.

- Carbon Capture and Removal Strategies
- The Global Energy Transition
- Green Hydrogen and Energy Storage
- Building Foundations for Cleantech in the Mid-Atlantic Region
- Energy Policy
- Smart Mobility and Electric Vehicles
- Nuclear Power and the Energy Transition
- Manufacturing and Supply Chains
- Bluetech and Ocean-related Solutions
- Green Finance: Investing in Our Future
- Agriculture's Solutions to Climate Change

Also, the **Mentor Match** program will return and there will be an in-person **career fair** for companies and students to meet and share information.

About the UNC Cleantech Summit

How it Started

Gregory Gangi, PhD., and professor at the University of North Carolina at Chapel Hill had the vision to create an event to connect those in the fast-growing cleantech industry with each other, government entities, and students. In 2014, the first UNC Cleantech Summit was held. Now, nearly one decade later, the two-day event is the largest of its kind by a university in the world.

Attendees

For the past five years of its nine-year run, this event has attracted nearly 1,000 attendees including those from the cleantech and energy industry, domestic and international government representatives, and students from across North Carolina.

Engagement Opportunities

This two-day annual event provides the following networking and learning opportunities:

- Connects companies with student talent: onsite career fair and Mentor Match program
- Showcases diverse cleantech ideas: ranging from the energy transition to mobility, hydrogen, and blue technologies
- Convenes industry and government to emphasize shared direction and solutions

Business Gets Done Here

Industry from across the world, the nation, and our state have attended this two-day event producing relationships that have contributed to the start of major business deals and mergers.
